

1. chAsense – analog, must have output clamped from 0–VDD.
2. chAfire – this should be biased to ground on the module, and going up to VDD will fire that channel
3. +3V – this is VDD. Should be attached to a precision regulator
4. Ground pin – conveniently in the center <shrug>
5. chBfire – analog, must have output clamped from 0–VDD.
6. chBsense – ditto
